Volume 6

1995

Number 3

- Thomas G. Field, Jr., *News: Risk and RAPA on the Internet* 189
- Baruch Fischhoff, *Ranking Risks*
Dr. Fischhoff considers the role of government in helping citizens manage risks. He then offers a general procedure for risk ranking and concludes by discussing what can be done with a list of risks. 191
- John M. Mendeloff, *Decision Analysis and FDA Drug Review: A Proposal for "Shadow" Advisory Committees*
The FDA seems to acknowledge that sometimes different standards of proof for assessing drug efficacy should be used. Dr. Mendeloff thus proposes a methodology that might illuminate the FDA's decision-making and help better to assess its decisions. 203
- Andrew F. Fritzsche, *The Role of the Unconscious in the Perception of Risks*
Dr. Fritzsche argues that our world is too "rational" and that the psychology of the unconscious, as developed by Jung, can be key to understanding responses to hazards and to resolving conflicts that arise in the political management of risks. 215
- Michael Greenberg, Dona Schneider & Jim Parry, *Brown Fields, a Regional Incinerator and Resident Perception of Neighborhood Quality*
The authors discuss an extension of their research into residential perceptions of neighborhood quality as affected by urban blight. They believe that unwanted facilities may help deteriorate neighborhoods to the point where they are fit only for such uses. 241
- William K. Hallman & Abraham H. Wandersman, *Present Risk, Future Risk or No Risk? Measuring and Predicting Perceptions of Health Risks of a Hazardous Waste Landfill*
Given that perceived risk is multidimensional, the authors seek better understanding by focusing on *health* risks and, more particularly, on their temporality. In this way, they attempt to measure more meaningfully psychological influences on risk perceptions. 261
